

Ceramic Sanitary Appliances

Unit Drinking Water Installations

Kiwa makes your quality visible

The product group Ceramic Sanitary Appliances offers you certification possibilities for a range of ceramic sanitary appliances.

The evaluation guidelines (BRL-K) for ceramic sanitary appliances also cover the corresponding European Standards.

The ceramic sanitary products are tested in our own modern, well-equipped laboratory, which is accredited to the International Standard ISO 17025. The certification procedure gives an efficient and suitable certification scheme that consists of tests and inspections of both the products and production process. The complete process is co-ordinated and carried out by qualified auditors of the unit itself or from the Kiwa office based in your country.

Kiwa evaluation guidelines for product certification

The certification process is carried out based on Kiwa evaluation guidelines, which contain requirements with respect to the materials utilized, the function of the product and the quality control of the production process.

Kiwa evaluation guidelines are drafted and maintained by the Board of Experts.

A Kiwa product certificate can be achieved for the following ceramic sanitary appliances:

- **WC-pans** according to BRL-K619;
- **Close coupled suites** according to BRL-K621;
- **Flushing cisterns** according to BRL-K620; and
- **Float operated valves** according to BRL-K615.

The examination of the products also covers compliance tests for the corresponding European Standards EN 997, EN 14055 and EN 14124.

One Stop Shopping

Our one stop shopping strategy gives you the opportunity to benefit from a combination of services that Kiwa can offer.

Kiwa provides, through one central point of communication, the knowledge and experience you require for a swift and efficient guide through the certification world.

Other services

Kiwa also offers the possibility to test other ceramic sanitary products for compliance with European Standards for CE marking.

If you require assistance with testing equipment for testing according to EN 997, please feel free to contact us.

Kiwa gives you the possibility to purchase measuring and testing equipment and tools for the testing of WC-pans and/or close coupled suites related to EN 997.

Your partner in progress

Kiwa participates in various (inter)national normalization committees, giving you direct access to the latest information from our experts about the product group.

Kiwa Certificate holders can count on timely and objective information about the international developments with respect to their products.

The product group Ceramic Sanitary Appliances is your worldwide expert centre, co-operating with various other international institutes. The expertise, but most of all the pragmatic approach by our experienced employees, has resulted in co-operations by means of mutual recognitions with other certification bodies worldwide. In this context, we would like to mention:

- *Africa*
SABS (South African Bureau of Standards)
- *Australia and New Zealand*
SAI Global, Global mark, IAPMO Oceana, WELS Regulator
- *Europe*
WRAS, DVGW, SVGW, ÖVGW, SITAC and CSTB/AFNOR.
