

Regulatory Update

June 2013

Indonesia - Modular Approvals

Following the continual changes and developments on this topic throughout the course of this year, SDPPI in Indonesia have now clarified the rules relating to leveragability of modular Approvals.

During the transitional period until December of 2013, the following rules will be implemented.

1. If the module will be imported into Indonesia as a module i.e. not installed in a host product, modular Approval is sufficient.
2. If the module will be imported into Indonesia installed in a notebook or tablet PC, modular Approval should be obtained. The notebook or tablet PC must then be Approved separately. However, there will be no repeat of local testing, the notebook or tablet PC can be Approved via a simple paperwork only process.
3. If the module will be imported into Indonesia installed in other products (not notebook or tablet PCs), host level Approval is then required and the host itself must undergo local testing. Local importers are no longer able to apply for Type B Approval for a host product based on Type A Approval for a module.

Please note that the situation is expected to be subject to further change over coming months.
