# Regulatory Update

## Introduction of IEEE 802.11ac in Ukraine

Following publication of Decree No. 295 dated May 14, 2015, IEEE 802.11ac Wi-Fi broadband access is now permitted in Ukraine. This technology is exclusively for products which use integrated omnidirectional antennae with a gain ratio of up to 9dB.

Wireless devices previously certified in Ukraine with 802.11ac disabled must be updated before this technology can be used; a paperwork only process can be followed.
