

INSPECTION: MAKING THE INVISIBLE VISIBLE

You manufacture products, execute projects, work according to certain processes. How do you make sure they meet the relevant quality standards, requirements and legal obligations? Inspection can help you reduce risks, control quality, verify quantity and meet regulatory requirements. It makes the invisible visible!

WHAT IS INSPECTION?

Inspection includes all kinds of examination, measurement, gauging, and comparison. We inspect practically everything, from small measuring devices to powerful pressure vessels, and from design review to maintenance plan. Thus, we determine the condition of a certain material or item, a process or a situation, and whether or not it conforms to requirements, regulations and standards.

SOME EXAMPLES OF WHAT WE INSPECT

ADVANTAGES

Inspection brings confidence

Inspection improves reliability and safety

Inspection improves efficiency

Inspection prevents disputes

Inspection reduces risk

Inspection improves customer satisfaction

Inspection safeguards your reputation

THE PROCESS

You make sure your product, project or process is ready for inspection

We inspect, on-site or remotely

We provide an inspection report

You use our findings as input for improvement

If desired or obliged, we return regularly to re-inspect

INDEPENDENCE

We act as a strictly independent third party when we inspect your products, (raw) materials, installations or anything else. We are also being 'inspected' ourselves by national and European accreditation institutions on a regular basis. Kiwa is a Notified Body (NoBo) for many European directives: we are authorized by a national accreditation body to perform inspections in compliance with international standards.
