

CE-Marking of Cement, Building Lime and Other Hydraulic Binders

Manufacturers, distributors or importers of cement, fly ash, silica fume, blast furnace slag, building lime and other binding agents can use the CE mark to place their products on the European market. The constancy of performance is assessed and checked by the manufacturer and a notified product certification body such as Kiwa.

For cement (EN 197-1:2011), fly ash (EN 450-1:2012), silica fume (EN 13263-1:2009), building lime (EN 459-1:2010) and other binders - European harmonized products - a CE mark is required in the EU. As a Notified Body by the EU, Kiwa supports you in obtaining the necessary certification and carries out the annual inspection of the plant as well as regular audit testing of your products in accordance with the prescribed standards. The sampling can be done e.g., by local, independent samplers.

Kiwa supports you in obtaining the necessary certification and carries out the annual inspection of the plant as well as regular audit testing of your products in accordance with the prescribed standards. We carry out all material tests usually in our own, accredited laboratories and draw on decades of experience. Our inspectors work worldwide. We are happy to adapt our service to your special wishes.
