

Testing of Fasteners and fixings

We are specialized in testing of anchors in concrete and masonry according to European and US guidelines. That makes us to your partner to get trusted results on fasteners and post installed rebars.

Get fasteners tested and approved by Kiwa.

What you need to know

Get your ETA for your fasteners from Kiwa as a TAB. Do you have a special product which is neither covered by a harmonized European standard nor by an existing European Assessment Document (EAD)? Kiwa can support you in writing your customized EAD for your product.

Service, trust and know-how as the basis of success

Regardless of whether it is a matter of expert opinions, planning services, state assessments, consulting or analytics: Kiwa has the necessary experience and expertise to provide you with a tailor-made solution for testing and approving your products.

Service

With more than 10.000 tests on anchors every year, our experienced team can help you to get your products approved. These are some tests that we offer:

Tension tests

Creep tests at standard and elevated temperatures

Seismic tests

Freeze/thaw test

Sampling

Installation testing

Identification tests

Trust

Numerous national and international companies already trust the know-how of our experts and profit from our wide range of fastening

technology know-how.

Know-how

Within the scope of our flexible accreditation according to DIN EN ISO / IEC 17025, we carry out tests for product developments and approvals, especially for concrete and masonry anchors.

As Technical Assessment Body, Kiwa is a member of the European Organization for Technical Assessments (EOTA). We can independently support EAD's application and approval procedures for your products for a European Technical Assessment (ETA).

Take advantage of our knowledge.
