

Testing, inspection and certification of concrete according to EN 206

Kiwa is your one-stop-shop for concrete. Kiwa supports you with all services concerning testing, inspection and certification of concrete according to EN 206 and concrete products. For in-situ concrete, we inspect and certify e.g., according to national standards. Furthermore, we have all the testing facilities for in-situ testing and laboratory testing.

For concrete products, we have a wide scope as a Notified Body, as well as for concrete raw materials.

And if you have special needs, we are happy to support you with our services:

- Kiwa is a Technical Assessment Body TAB for [European Technical Assessments ETAs and European Assessment Documents EADs](#)
- Testing of concrete with increased acid-resistance according to the accredited method of the “MPA Performance-Test”
- Assessments e.g., of the durability of concrete (XA3, >XA3)
- Qualification of concreting methods for waste packages for radioactive materials from nuclear power plants (conception of the concretes, official approvals, QM-system)
- Certification of the sustainability of your concrete ([CSC certificate](#) , [Life Cycle Assessment](#), [EPD Environmental Product Declaration](#) etc.)
