

Adhesive Bounding Training (EAB/EAS)

In the second half of 2019, you can reserve your seats for our new planned EAB and EAS trainings.

Training information

In the railway sector, the enterprises that produce and maintain their work are required to certify their conformity with DIN 6701-2 .
DIN 6701-2 standard is a certification for: manufacturers / suppliers combining adhesives with the rail sector. DIN 2304 standard is developed for other industries except railways; manufacturers / suppliers joining with bonding.

Practical information

Adhesive Training Background & Description

Companies having the bonding process according to safety requirements (A1 / S1, A2 / S2, A3 / S3, A4 / S4) have requirement mandatory employment of European Adhesive Practitioner (EAB), European Bonding Specialist (EAS) and European Bonding Engineer (EAE).

Targets

- Participants will be trained to use adhesive technology in industrial production,
- This training provides the basis for pasting, specific aspects of the bonding process and an understanding of what needs to be considered in production. Thus, the content and importance of the relevant work instructions becomes clear,
- Successful completion of the course allows participants to undertake the independent technical bonding work.
