

BRL-K917/02 Vapor return valves for tank installations

Evaluation Guideline BRL-K917/02 Vapor return valves for tank installations is intended for vapor return accessories which are applied in tank installations, where the return vapours of liquid petroleum products are returned to the tanker. The tank installations are intended for the storage of liquid petroleum products in underground storage installations under atmospheric pressure and ambient temperature.

For whom?

Evaluation Guideline BRL-K917/02 is of added value for suppliers and producers of vapor return supplies, tank owners and tank installation companies.

When is it necessary?

Evaluation Guideline BRL-K917/02 Vapor return valves for tank installations applies to vapor return supplies which are used in gas stations where a vapor return system is mandatory. Installation of these vapor return valves is carried out by an installation company that is certified in accordance with Evaluation Guideline BRL SIKB 7800/BRL-K903.

Interested?

If you are interested in certification, please complete the application form. If you have any questions, please contact our sales office.

Note:

This Evaluation Guideline is only available in Dutch.
