

## Chimneys testing and certification

Currently it is mandatory for chimney products sold in the EU to carry the CE mark. Kiwa can test chimneys according to the CPD 89/106/EEC. The marking may only be affixed after successful completion of testing, auditing of factory production control and the issue of a certificate by an independent accredited authority. Kiwa with test and certification facilities in the Netherlands, Italy and the UK is able to test metal, steel, and plastic chimney products to the EN standards and for CE marking.

Producers, suppliers, manufacturers, retailers, marketers

Currently it is mandatory for chimney products sold in the EU to carry the CE mark. The marking may only be affixed after successful completion of testing, auditing of factory production control and the issue of a certificate by an independent accredited authority. Based on your request, Kiwa Gastec sends you an offer specifying, among other things, the test program, sampling, inspection of your production process, and the certification schedule. Our offer takes account of the product test results you may already have acquired from other accredited test institutes. The result is a test report and a certificate. A surveillance agreement is the final step before you can enter the European market.
