

Feasibility Studies on Alternative Fuels

Kiwa Technology carries out feasibility studies to support gas traders, fleet owners and governments; to facilitate investment, safety, and provide an overview on the possibilities of alternative fuels CNG, LNG, H2 and CH2. To serve this objective, the study covers various aspects of the business concept development, start-up, production, marketing, and finance and business management.

The study also provides sector information, brief on government policies and international scenarios, which have some bearing on the project itself. Kiwa Technology carries out safety assessments concerning alternative fuels and fuel systems (tanks, vehicles and drive systems). We perform risk assessment on components, vehicles, stations and standards.

Gas traders, fleet owners and governments

Kiwa is your knowledge center for alternative fuels. The objective of our feasibility study is primarily

- To support of investment decision
- To assess the safety of alternative fuel systems and infrastructures
- Feasibility and safety
