

Alarm Components Scheme

The Alarm Components Scheme certifies that an electrical security product complies with the technical product standards, needed for market access in various countries inside the European Union. The Alarm Components Scheme also proves that the performance and quality of the product are still in line with when the product was first produced (System 2 and 5). This service will provide you with the certificate required for registration when you are introducing your product to any country within the European market.

Different countries inside of the EU have different demands when it comes to the certification of your products and Kiwa FSS Products (formerly known as Kiwa Telefication) will help you meet the demands for all these different countries. To find out more about the demands in specific countries where you want to introduce your products, please get in touch with us.

Kiwa FSS Products is able to provide three types of certification under the Alarm Components Schemes

- System 1a – Type-Examination Certificate
- System 2 – Certificate of Conformity
- System 5 – Certificate of Continued Compliances

Additional information about these schemes and the matching certificates can be found on the pages for these specific schemes.

If you want to acquire one of the three certificates that are available in order to be able to bring your products to the European market.

If you want more specific information for your organisation, please fill out the contact form on our website or contact us by phone or email. We will inform you about the information required in order to make a quotation according to your needs. After this we will set up a plan according to your needs and requirements.
