

In the European CE marking basic requirements for safety and rational use of energy are covered. The Dutch Gaskeur decides on important additional properties. With the voluntary certification brand Gaskeur, the industry shows that it is willing to go beyond legal requirements.

Gaskeur is a voluntary certification brand of Kiwa. The Dutch heating industry is at the forefront when it comes to developing clean, efficient and energy-efficient appliances. The HR-technology (high efficiency), for example, is a Dutch invention which is now widely known and used throughout Europe. The VFK (Association of boiler manufacturers) and the independent Kiwa put together a step in 1994 with the creation of the label Gaskeur. Gaskeur is now a brand of Kiwa.

The goal is to install and to promote use of energy saving and efficiency-fired boilers of high quality and environmentally friendly structures. Gaskeur meets the latest ideas on technology and society. The qualitative information labels are recognized at the highest standards by governments, manufacturers, installers and end users.

Applicable labels are: Basic, HR, CW/HRww, NZ, SV and HRe.

With the voluntary certification brand Gaskeur, you enter the market with devices that go beyond legal requirements when it comes to energy efficiency and efficient heating and hot water preparation, environmentally friendly construction and high quality.

You can ask for a quotation or information either by phone or e-mail. Starting point for a quotation are the requested Gaskeur labels.

After approval of the quotation the test work starts. A certificate will be sent to you when all the test work has been performed successfully and you have entered into a surveillance agreement with Kiwa
