

## Hydrogen components and systems testing and certification

**One of the success factors to create a hydrogen economy is having safe and certified hydrogen components systems. Kiwa is one of the leading parties in this area. We can assist you, as a manufacturer in the hydrogen business, to get safe and certified products. Our services can already start during your product development which will minimize your costs and optimize the development process.**

Utilization of hydrogen technologies is the key to securing a successful hydrogen economy in the future. Kiwa is able to test your hydrogen components according to the applicable regulations at the European Market.

Kiwa can provide you the following services:

- Safety and certification consultancy
- CE certification of hydrogen components

Hydrogen components and systems testing and certification is relevant to manufacturers of hydrogen components.

If you wish to launch your hydrogen components on the European market, you are compelled to test and certify all these components. If you deal with international market outside of the EU, we can usually provide you with the necessary certification there as well. Let us be your only stop in the world of testing and certification.

You can ask for a quotation or information either by phone or e-mail. We will set up a plan according to your requirements. After approval of the quotation by both parties the actual test work starts. A certificate will be sent to you when all the test work has been performed successfully and you have entered into a surveillance agreement with Kiwa. Nothing is certain in advanced, we will carry out everything according to your needs.
