

Investigation accidents involving gas

Kiwa Technology investigates the cause of all types of accidents involving gas. These investigations are required in order to continue to use gas safely and also in order to assign responsibility for damages to the right parties.

Energy supply companies, forensic technical investigation departments, installation companies, manufacturers, housing associations, insurance companies, firms of loss adjusters, technical criminal investigation department

Identifying the cause of an accident involving gas is a specialised task. Furthermore, independence and impartiality also required.

Kiwa Technology can assist you in identifying the cause of explosions, fires and cases of carbon monoxide poisoning.

Why should accidents involving gas be investigated?

In order to identify the cause, prevent recurrence in comparable situations, improve regulations, identify structural faults or determine which parties are guilty.
