

NSF/ANSI 14 product certificate for Plastics Piping System Components and Related Materials

As you probably know, all major plumbing codes in the US and Canada require compliance to NSF/ANSI 14 for Plastics Piping Systems and related Materials. Good to know that Kiwa is your one stop partner for testing, inspections and certification against NSF/ANSI 14.

NSF/ANSI 14 establishes minimum physical, performance, health effects, quality assurance, marking and recordkeeping requirements for thermoplastic and thermoset plastic piping system components, including but not limited to pipes, fittings, valves, joining materials, gaskets and appurtenances. The requirements also apply to materials (resin and blended compounds) and ingredients used to manufacture plastic piping system components.

NSF/ANSI 14 refers to applicable performance standards for the various components (ASTM, AWWA, ASME, CSA), long-term strength of plastic pipes (ISO 9080) and to NSF/ANSI 61 for drinking water applications.

NSF/ANSI 14 is relevant to manufacturers of Plastics Piping Systems and related Materials. Kiwa is the right contact address for obtaining the necessary test reports, inspections of the production locations and arranging the certifications needed to become product acceptance and code compliance across North America. Kiwa has a close cooperation with recognized North American certification agencies.

The vast majority of US states require compliance to NSF/ANSI 14 for plastics piping systems and related materials. For more information and applications please contact us.

Seeking compliance to plumbing codes?

Compliance to NSF/ANSI 14, related ASTM product standards, and NSF/ANSI 61 in case of applications in contact with drinking water, is a solid base for obtaining listing according to the most important plumbing codes, like International Plumbing Code IPC and
