

## Oil Boiler Testing

**We test oil boilers to OFTEC and EU standards. Testing includes efficiency, emissions and safety testing. Our regular work covers OFTEC approvals, efficiency testing under the Boiler Efficiency Directive, life testing of components and oil-fired products and general consultancy on anything to do with oil-fired appliances. We have long been a centre of expertise when it comes to burning oil safely.**

This service is for oil appliance manufacturers and retailers.

In addition to our core activities, we provide a suite of oil related services such as annual surveillance as required by the Boiler Efficiency Directive, oil tank quality inspections, and assessment of level probes and alarms.

OFTEC approval is advised for oil-fired appliances, tanks and components. We are accredited by OFTEC to conduct approvals.
