

Product safety

We test product safety in accordance with national and international standards, guidelines and regulations.

We test product safety in accordance with national and international standards, guidelines and regulations.

The tests take place either in our high quality equipped test laboratory or at your premises as manufacturer or supplier.

We help you to place your products in global markets according to local technical and regulatory requirements.

To see where our core competencies lie in product testing, please click on the appropriate link:

- [Testing laboratory for electrical and electronic equipment](#)
- [Safety testing of active medical devices](#)
- [CB test laboratory and certification body](#)

You can rely on us as a strong, local partner. We can test and evaluate your products according to the required international safety requirements and obtain the required certification for you.

We offer you international certifications from a single source, such as USA/Canada approvals (NRTL/C) or certifications for Australia (Certificate of Suitability).
