

Radio Testing

Radio techniques are being increasingly deployed in virtually any application area. Whether it concerns cordless telephony, wireless movement detectors, Wi-Fi adapters, toys, remote controls, Bluetooth® peripherals, VHF-transceivers, anti-collision radars and so on, radio technology is inevitable in our modern world.

You can rely on our long-lasting experience in RF-measurement techniques and related compliance standards, anywhere in the range 9 kHz to 110 GHz. We think that should cover most needs.

We have a team of qualified engineers helping our customers at every stage of the inspection process. Our knowledge of quality standards and our communication with the official authorities on maintenance and inspection regulations worldwide are invaluable to our customers. Would you like to know more about our inspection services? Get in touch with us!
