

## SCC / SCT – Safety Certificate Contractor / Safety Certificate Temporary Workers

If you want to carry out inspections or repairs of production lines or if you want to build or rebuild facilities or if you want to lease personnel for these activities you need to demonstrate a high safety standard as clients want to reduce the safety risk on their sites. This can be done by presenting a SCC/SCT certificate.

### SCC

The system Safety Certificate Contractor (SCC) was developed by the petrochemical industry. The SCC system should make sure that the company has organized any health and safety topics.

**There is a differentiation between SCC\* and SCC\*\*:**

- SCC\* is for companies with up to 35 employees not using any subcontractors.
- SCC\*\* is for companies with more than 35 employees not using subcontractors.
- SCCP is for companies working in petrochemical industry.

### SCT

The System Safety Certificate Temporary Workers (SCT) was developed for companies leasing staff according to other companies. The staff is then working in repairs, rebuilding etc.

SCT has been developed for companies that provide personnel to other companies in accordance with the AÜG.

### Process Steps

Using a questionnaire organization and implementation of topics with respect to safety and health protection are checked. The
