

Solid Fuel Products

Since almost 20 years we have been helping manufacturers to address their responsibilities under the legislation affecting solid fuel and fluid fired appliances. We operate unrivalled testing facilities in Italy and the United Kingdom for manufacturers of wood and mineral fuelled appliances as well as for liquid fuels.

The following list is indicative rather than inclusive:

- Freestanding room heaters;
- Many different types of boilers;
- Open fires;
- Cookers;
- Decorative ethanol fires;
- Pellet-fired stoves and boilers.

We are HETAS's accredited laboratory in the UK and work closely with them. We will be happy to provide you with any more information you might need, so please contact us!
