

Testing Inspection and Certification of sports facilities on site

Kiwa ISA Sport wants to help realize high-quality sports facilities because we believe that this is of essential importance for the athlete. Besides this aspect, the client thus ensures that the accommodation meets the requested standards and that a certain level of quality is achieved. This not only applies to newly built sports facilities but also renovated accommodations. That is why Kiwa ISA Sport conducts a fully independent inspection on site after completing the new or renovated sports facility. The inspection may include both indoor and outdoor accommodations.

Kiwa ISA Sport is well equipped to test indoor and outdoor sports facilities anywhere in the world. Tests on sports surfaces are performed according to national association standards or international standards, like FIFA (soccer), FIBA (Basketball), FIH (hockey), ITF (tennis), World Athletics and World Rugby. Important aspects of the inspection are:

- Player – surface interaction, like shock absorption, stability, underfoot friction
- Ball – surface interaction. Like ball bounce, ball roll
- Other characteristics like dimensions of the field, evenness, condition, safety.
- Subbase testing

Kiwa ISA Sport is accredited according to the international associations and the accreditation council. Besides sports surfaces, Kiwa ISA Sport is well equipped to test floodlights, facility equipment (like goals, sideboards), and indoor sports facilities (including lighting and acoustics).
