

Infrastructure consultancy services

We have ample experience with all sorts of pavement constructions. Infrastructure consultancy services that meet clients demands. Experience as well as new developments are incorporated in our solutions to meet our clients demands. From municipal roads to container terminals, from dike revetments to airports. We have the knowledge and experience and love working on solutions with and for our clients.

At Kiwa we work on projects related to all sort of infrastructures like highways, container terminals, airports and dike revetments. In this, we have ample experience with all kinds of constructions and paving materials like asphalt concrete, concrete and block paving. We cover design, maintenance and management of infrastructure and set up research plans to come to the best solutions for our clients. We work in close cooperation with our clients to meet their demands and make suggestions for solutions based on our own experience as well as new developments. We believe in open communication and sharing knowledge. This way the client is kept informed about the progress of the project.

At Kiwa we also have the disposal of road-testing equipment and laboratory facilities. This means we can offer a complete package of sampling on-site, research in our laboratory and consultancy services.

We also provide training for clients for pavement design, maintenance and management. Next to that, we do research and tests of existing and new materials. We also provide assistance on technical details for drawing up contracts.
