

Cement and Concrete Testing

Slip Resistance Testing, tensile strength, workable life, flow and setting time of concrete products, additives, admixtures and pigments; evaluation of concrete repair and cement materials, we can assess virtually any material used in modern day construction.

We are a UKAS accredited testing laboratory (No.0529). See our [scope of accreditations](#).

This service is used by construction companies, contractors and civil engineers.

Using internationally recognised BS, BSEN, ASTM and DIN standards alongside in-house methods, you can be assured of a professional and completely independent testing service for the evaluation of:

- Additives and Admixtures
- Pigments (Cement and Lime)
- Skid and Slip Resistance Testing
- Cast Stone Products
- Masonry Units
- Precast Concrete Products
- Cementitious Product Testing
- Cement Testing
- Product Development
- Concrete Testing (General)
- Bespoke Testing
- Ultrasonic Evaluation and Crack Monitoring
