

Efficiency Test Rigs

Pretty much anything you need we can build. There are not many laboratory testing situations that we cannot help with. We've a good reputation for putting together time-saving equipment for almost all combustion-related scenarios.

Our test rigs are useful for manufacturers wanting to test their products in-house.

We've built flame tubes for a company in China, cooling sets for boiler manufacturers to help them keep a constant return temperature, meteo stations for use in conjunction with our meters, a wide variety of test rigs for safety testing, in-line test stations, end-of-line audit rigs and lately solid fuel appliance test rigs.

We have built up an enviable reputation as a supplier of state-of-the-art efficiency testing equipment. The accuracy of our efficiency test rigs is such that the results are accepted by Notified Bodies, making the rigs useful for both development and final testing. We also provide a rig calibration service.
