

Food Bespoke Audits

Kiwa Agri Food has proven experience in developing, writing and undertaking many different types of audits tailor made to the needs of individual clients, ranging from major retailers to small suppliers.

Our flexibility and responsiveness are appreciated by new clients - we often step in at the last minute when companies have been let down by their auditors, and complete audits to allow certification to continue.

These audits are pertinent to a range of clients from major retailers to small suppliers.

Examples of these audits include:

- HACCP focused audits
- Allergen Audits - specifically focusing on the management of the 14 allergens, enabling "free from " claims to be made in full confidence and that statements such as "may contain" are avoided
- Depot Audits - specifically focusing on hygiene, health and safety and quality aspects within the depot environment
- Small Supplier Audits - an audit designed to help guide suppliers in establishing a quality management system suitable for their operation
- Store Audits - looking at all aspects of trading standards and legality
