

Hydrogen Testing & Certification

Kiwa provides testing, certification and technical guidance at all aspects of the hydrogen infrastructure chain, from generation to end use in our homes, wider built environment and transportation.

Kiwa UK is a Notified Body under the Gas Appliance Regulation, and the EU ETS, with extensive experience of hydrogen appliance inspection, field trials, consultancy and thought leadership in the practical and safe application of hydrogen.

Kiwa has advised BEIS and the Climate Change Committee on the national use of hydrogen and all the UK gas distribution networks on the potential demand for hydrogen in the 10 largest cities in the UK. The Kiwa Gas team has a unique blend of 'boots on the ground' engineering experience and a pool of expert engineers advising government, gas network operators and related trade bodies. We support decision makers with practical knowledge, through training and test work as well as scientific understanding from teams immersed in the industry and engaged with its stakeholders to disseminate knowledge in simple and relevant perspectives.

Read more about our hydrogen testing and certification services in our [Hy4Heat](#) case study.

For an overview of our services see [Kiwa's Hydrogen expertise](#) and for more information specific projects, please see our [Case Studies](#).
