

Micro-CHP Testing

Kiwa Gastec is one of Europe's leading testing and certification bodies for cogeneration and power systems. Micro-CHP is the simultaneous production of heat and power (often called co-generation) at small scales. We are involved at many levels including testing and certification of individual technologies, data audit of the Carbon Trust m-CHP field trials, and management of large laboratory tests to assess the quality of delivered power from m-CHP systems.

This service is for manufacturers of cogeneration and power systems.

We work with many technology types including:

- Cogeneration engines
- Cogeneration fuel cells
- Fuel cell power systems
- Gas heat pumps
- Hydrogen generators and components
- Certification body under the MCS

We provide pre-compliance assessment, approval assessment, quality assessment, product certification and surveillance for GAR-included products. We are also the principal author of Publicly Available Specification (PAS) 67 - the performance standard for microCHP units.
