

Regulatory Compliance Consulting

At the time of product development, careful planning is needed to ensure a product complies with the requirements in its intended market and that the most cost-effective route to compliance is considered. It's important, therefore, that all relevant parties are involved at this stage - ensuring the regulatory requirements in all key markets are addressed before the product design and EU/FCC test plans are finalised.

The risk of not considering your global market at the time of EU and FCC testing may result in additional costs later down the line - for example the need to obtain multiple Approval Certificates vs a single Approval, or the need to carry out additional testing to take into consideration country-specific deviations.

PCS can offer manufacturers a tailored consultancy service explaining key considerations to make and the best routes to achieve Global Market Access. Be it an introduction to Regulatory Type Approvals, or an in-depth review of a new product in development - our aim is to help manufacturers bring their products to market in the most efficient way possible.

Wide range of Radio, Telecom, and ITE devices and consumer Electrical & Electronic Device for testing and certification

A few example of products to obtain Radio (RF), Telecom and ITE Type Approval:

- Consumer Electronics
- Vehicle Telematics
- Wireless Industrial Electronics
- Internet of Things
- Network and IT equipment
- WLAN, Bluetooth, UHF RFID & Short Range Devices
- Cellular Radio
