

SaltAS Certification

SaltAS is an assurance scheme which demonstrates to specifiers and users that their salt supplies meet all relevant quality standards and conform to their tender requirements.

The SaltAS scheme is aimed at local authorities.

The SaltAS scheme ensures that road salt meets BS 3247, which covers:

Grain size – this is important as large grains damage windscreens, costing local authorities considerable sums in litigation (as well as drivers).

Salt treatment – imported salt is often mixed with sand, which blocks drains – another cost for local authorities.

Imported salt does not necessarily meet BS 3247, and can have serious financial consequences for local authorities.
