

Recycled Materials for Construction

Responding to the increasing activities of the waste recycling industry working to current EA/WRAP Quality Protocols, we have extended our range of services to address the requirement for planned testing regimes covering waste acceptance criteria for incoming material sources and 'end compliance' to product specifications.

'Under WRAP' The Programme for Recycled Materials, the Quality Protocols and associated testing requirements.

In 2000 the Government's Waste Strategy (England & Wales) appeared. Aimed at sustainable development and waste management, its purpose was the promotion of re-use, recycling, composting and use of wastes as fuel.

2001 saw the introduction of The Strategy and Waste Resources Action Programme (WRAP). It carries a remit to "Overcome market barriers to promote re-use and recycling."

Kiwa:
the home of
independent, high
quality testing

How can we help?

Our level of service begins with a basic WRAP suite including 10:1 leaching/leachate testing, grading and relevant chemical parameters and extends to advanced or bespoke WRAP and compliance suites including chemical and geotechnical testing.

Particular materials include recycled aggregates, secondary aggregates (PFA,FBA, IBA, Colliery Spoil, Foundry Sand) and Gypsum.

Other Services:

As an inspection, testing and investigation company with over 35 years of service to the construction, civil engineering, environmental and associated industries. Kiwa CMT Testing provides our clients with a comprehensive scope of laboratory and site testing and investigative operations, under the following headings:

- Contaminated Land
- Offsite Disposal
- Chemical Analysis
- Concrete & Mortar
- Building Products
- Geotechnical Investigations
- Lighting Column Testing
- Structural Investigations
- Sports Stadia Barrier Testing

We provide key on-site and off-site investigative, consultative and testing services. For our clients we are 'The Obvious Choice'.
