| - Chapter 3, Raw materials, products, and materials | X | X |
| - Sections 5.1.1 through 5.1.7, Product requirements | X | X |
| - Section 5.1.8, Resistance to UV ageing | X | X2 |
| - Section 5.1.9, Resistance to SO2 | X | - |
| - Section 5.2, Conditions of application/use | X | X1 |
| Other: Correct use of certificates, logos, and pictograms | X | X1 |

Explanations:

- (a) At changes of the BRL (standard) and/or (the composition of) the product and/or expansion of product types, Kiwa will determine which specific requirements will have to be re-assessed, based in the type of declared/requested change.
- (b) The frequency is four visits per year. Two years after initial certification, this frequency may be reduced by one visit per year to a minimum of two visits per year, provided that no deviations in product properties and/or performance in the application were observed in the preceding period.
- X1 Requirement will be assessed once per year. The assessor determines which surveillance audit(s) fit most.
- X2 Requirement will be tested once per year by means of testing by an external laboratory.
- (F) Requirement is optional. Assessment is only mandatory in case a declaration on this requirement is part of the KOMO certificate (to be granted).
