

Meeting NATO quality expectations. AQAP 2110

**kiwa**

# AQAP 2110 certification

## AQAP 2110 certification

Defense and security sector suppliers are expected to demonstrate not only product quality, but also reliability, traceability and compliance with strict international requirements.

AQAP 2110 is a NATO quality assurance standard for organizations supplying products and services to defense and security-related industries. Certification demonstrates that the organization operates a quality management system aligned with ISO 9001 and additional NATO-specific requirements related to risk management, configuration control, traceability and quality assurance throughout the supply chain.

AQAP 2110 certification supports participation in defense-related procurement processes and international supply chains. It strengthens confidence from clients and contractors while demonstrating readiness for high-reliability and security-sensitive projects.

## Why choose Kiwa?

Kiwa provides independent and professional certification services with experience in quality management systems, regulated industries and complex operational environments.

Our auditors understand the expectations of high-reliability sectors and conduct certification assessments with a practical and business-oriented approach aligned with international standards and industry requirements.

We support organizations throughout the certification process with a clear, structured and internationally recognized approach.
