

Control and Indicating Equipment (CIE) – Fire detection and fire alarm system (EN 54-2)

The EN 54-2 is applicable for Control and Indicating Equipment (CIE) used in a fire detection and fire alarm system. A fire detection and fire alarm system that communicate for the purpose of detecting fire at the earliest practicable moment.

The EN 54-2 provides:

- local and/or remote fire alarms to organizations having authority to take care of buildings and their environment;
- signals to initiate, in the event of a fire, the operation of other fire protection and equipment/systems.

Such a fire alarm system will require control and indicating equipment (CIE) to control the alarm signal(s) and the fire alarm functions. The control and indicating equipment may be a separate unit or may be physically combined with other fire detection and fire alarm control and indicating equipment.

Only with a certificate it can be proved that the EN 54-2 Control and Indicating Equipment (CIE) is compliant to the standard.

Normally a certificate will be issued after the testing has been successfully completed. A certificate for this product provides you market access for the European market.

If you want more specific information for your organisation, please fill out the contact form on our website or contact us by phone or email. We will inform you about the information required in order to make a quotation according to your needs. After this we will set up a plan according to your needs and requirements.
