

Valves and accessories for drinking water transport and drinking water distribution systems

The products are intended for use, above and below ground, in drinking water transport and drinking water distributions system supply lines intended for human consumption. This evaluation guideline specifies the minimum requirements for design, functionality and test methods irrespective their type and use materials.

The products are intended for use, above and below ground, in drinking water transport and drinking water distributions system supply lines intended for human consumption. This evaluation guideline specifies the minimum requirements for design, functionality and test methods irrespective their type and use materials.

Steps to obtain a certificate with the Kiwa Water Mark are:

1. Fill in an application form and send it to Kiwa (application form is located on the right side);
2. Kiwa sends a quotation, which is at the same time a concept-agreement, drawn up according to the requirements of the guideline;
3. After mutual signing of the quotation, the agreement is definitive and the initial audit can start;
4. After positive results of the initial audit, the certificate will be issued;
5. The certificate is valid indefinitely;
6. A part of the agreement is periodic audits.

Important aspects of the initial audit (steps 3 and 4) include:

a. Testing with regard to the product and/or performance requirements.

Testing, often carried out in our own laboratories, demonstrates that the product meets the certification requirements for functional and hygienic aspects, such as durability, dimensions, composition of materials, etc.;

b. Assessment of the production process, quality system and internal quality control (IQC) scheme.

To ascertain that the producer is continually able to manufacture products that meet the certification requirements.

The periodic audits aim at the maintenance of the management system, in order to maintain confidence that the producer is still able to manufacture products that meet the certification requirements. The periodic audits include functional and hygienic tests of the certified products.

The audit frequency varies from product group to product group: in general, 2 to 4 times per year.

Conditions for the certification process are stated in the Kiwa Regulations for Product Certification and the General Terms and Conditions of Kiwa for the performance of orders.
