

ETAG 016: Self-Supporting Composite Lightweight Composite Panels

ETAG 016 relates to **Self-supporting composite lightweight composite panels that do not contribute to the loadbearing capacity of the works**. The panels are used for roofs, external walls, internal walls and ceilings, or claddings of walls.

ETAG 016 is divided in several parts:

- Part 1: General part
- Part 2: self-supporting lightweight panels for use in roofs
- Part 3: self-supporting lightweight panels for use in external walls and claddings
- Part 4: self-supporting lightweight panels for use in external walls and claddings

For whom?

Manufacturers and suppliers of self-supporting lightweight panels.

When is it required?

Drafting an ETA is not mandatory. However, requests for CE-marking by customers are increasingly common for building materials.

Process

ETAG 016 describes all requirements, assessment criteria and methods of assessment used applicable for partition kits for non-loadbearing walls.

For certification steps 1-5 apply. Kiwa is happy to guide you through these steps.

- Download ETAG 016 part 1 and 2, 3 or 4, whichever is applicable, from the [EOTA website](#).

- Request a quotation from Kiwa by using the application form.
- Have Kiwa prepare an ETA based on ETAG 016. Kiwa also is a Technical Assessment Body (TAB) for ETAG 016. More information can be found on [this website](#).
- Kiwa will perform an FPC assessment on all criteria for certification based on your ETA. If requirements are met, a certificate will be granted. Any non-conformities first will have to be resolved.
- In order to maintain your certificate, Kiwa will perform annual audits to verify that processes continuously meet requirements.

Regulations regarding EOTA (European Organisation for Technical Assessment) can be found on the EOTA [website](#).
